

CHEMICAL PEEL POST-TREATMENT INSTRUCTIONS

AFTER YOUR VITALIZE PEEL®/ REJUVENIZE PEEL™:

It is crucial to the health of your skin and the success of your peel that these guidelines be followed:

- If retinoic acid was used as part of your treatment, your skin will have a light yellow tinge immediately after the procedure. This is temporary and will fade in 1 to 2 hours. SkinMedica® recommends waiting until the evening to wash your face, however if you should choose to wash it sooner, please wait until after the yellow tinge completely disappears (1 to 2 hours).
- It is imperative that you use a sunscreen with an SPF of at least 30 and avoid direct sunlight for at least 1 week.
- Patients with hypersensitivity to the sun should take extra precautions to guard against exposure immediately following the procedure as they may be more sensitive following the peel.
- Your skin may be more red than usual for 2 to 5 days. Please avoid strenuous exercise during this time.
- Approximately 48 hours after the treatment, your skin will start to peel. This peeling will generally last 2 to 7 days. DO NOT PICK OR PULL THE SKIN. Allow skin to peel at its own pace.
- When washing your face, do not scrub and do not use a wash cloth. Use a gentle cleanser such as Cetaphil® Cleanser or any other cleanser that does not contain soap.
- After washing your face, apply Aquaphor®, or other appropriate moisturizer recommended by your medical professional for 4-5 days and as often as needed to relieve any dryness.
- You may resume the regular use of Retin-A, alpha hydroxy acid (AHA) products or bleaching creams ONLY after the peeling process is complete.
- Wait until peeling completely subsides before having ANY OTHER FACIAL PROCEDURES, including but not limited to:
 - Facials
 - Microdermabrasion
 - Laser treatments (including laser hair removal)
 - Facial hair removal
 - BOTOX® injections
 - Injectable fillers

ADVERSE EXPERIENCES THAT MAY OCCUR AFTER YOUR SKINMEDICA® PEEL:

It is common and expected that your skin will be red, possibly itchy and/or irritated. It is also possible that other adverse experiences (side effects) may occur. Although rare, the following adverse experiences have been reported by patients after having a SkinMedica® Peel: skin breakout or acne, rash, swelling, and burning.

FOR VITALIZE® PEEL ONLY:

Although most people experience peeling of their facial skin, not every patient notices that their skin peels after a Vitalize® Peel procedure. Lack of peeling is NOT an indication that the peel was unsuccessful. If you do not notice actual peeling, please know that you are still receiving all the benefits of the Vitalize® Peel, such as: stimulation of collagen production, improvement of skin tone and texture, and diminishment of fine lines and pigmentation.

There are a number of reasons why a patient may not have peeling or may experience minimum peeling. The reasons may include:

- Having peels regularly with a short interval between peels
- Frequent use of Retin-A, AHA, or other peeling agents prior to the Vitalize® peel treatment
- Severe sun damage

Proper skin evaluation by your skin care professional prior to your peel is important and will help predict the outcome of your peel.

Please call the office immediately if you have any unexpected problems after the procedure.
