

LASER TATTOO REMOVAL PRE-TREATMENT INSTRUCTIONS:

No sun exposure, tanning beds and sunless tanning cream for 4 weeks prior to treatment.

Use a broad spectrum UVA/UVB sunscreen with an SPF of 30 or higher. Apply to the area to be treated every 2 hours when exposed to the sun.

Do not receive any soft tissue fillers within one month prior to Laser Tattoo Removal.

Do not receive any botulinumtoxinA injections one week prior to Laser Tattoo Removal.

Clean shave the night before or morning of treatment if there is any hair present around or on the area of the tattoo.

Apply your numbing cream 30 minutes prior to your scheduled treatment and wrap with an occlusive dressing (such as saranwrap). This cream may be purchased in our office.
